## Apache Force SSL on vhost

**By rac**

Published: 31.12.2007 - 11:44

Edit your htaccess (or server conf file) to look like this one :

1.  
<Files \*.ini>
2.  
Order Allow,Deny
3.  
Deny from all
4.  
</Files>
- 5.
6.  
RewriteEngine on
7.  
RewriteBase /
- 8.
9.  
RewriteCond %{SERVER\_PORT} !443

---

10.  
RewriteRule ^(.\*)?\$ https://%{SERVER\_NAME}\$1 [L,R]

For those of you who don't know about RewriteCond?, the first one check the server port used to connect. If it's not 443 (default HTTPS port), it redirects all request to the same https vhost and URI.
