Cool Algorithm to render 3D from just one Outdoor (also doesn't work with indoor at the moment)  
Picture

Below is a low quality Flash rendered movie

```
V3Embed.show("/image/image/25266/large/CraterLake.jpg", "/wrl/wrl/28306/28306.wrl", 600, 555, "/movie/movie/28306/28306.swf");
```

The Sample below has to be viewed with an [VRML Plugin](#)

VRML version (if supported, else you will see nothing)
