
Eclipse can't start after installing EclEmma plugin

By rac

After Installing the EclEmma (1.4.3) plugin for Eclipse (this is for Testcoverage, see <http://www.eclEmma.org>) I had the Problem that Eclipse did not startup again with following Error message:

```
...
!ENTRY org.eclipse.osgi 4 0 2009-10-28 14:07:47.690
!MESSAGE Application error
!STACK 1
org.eclipse.swt.SWTError: Not implemented [multiple displays]
    at org.eclipse.swt.SWT.error(SWT.java:3803)
..
```

After some researching and talking with others, I found the solution to get Eclipse startup again:

- Removing all the files from the plugin
- rm features/com.mountainminds.eclEmma.*
- rm plugins/com.mountainminds.eclEmma.*

- Reverting platform.xml from History
- Copy latest xml from the folder configuration/org.eclipse.update/history/ to configuration/org.eclipse.update/platform.xml

Now the Plugin doesn't work but Eclipse is starting up again.

My Eclipse Version this has happened is:

Version: 3.4.2

Build id: M20090211-1700
