update

See this post for new hack because old hack doesn't work anymore =>
<http://www.2030.tk/new-maps-navigation-hack>

Howto Enable Navigation outside US if you don't have a rooted phone?

Until now, just root users have been able to use Google Maps Navigation outside US but thx to TAPP (The Anonymous Perfect Patcher) non root users can install a special version of Maps and use Navigation...

See [this thread](#) on XDA for more details.

You can get the patched apk from [this link, or see XDA Thread for updated mirrors](#) , thx to brut.all to apply the patches from TAPP and putting the final APK's into space ;-)

Of course, the downside of this method for non rooted users is, that they have now 2 identical Maps application and just one of them will work.

For easy starting of navigation, take a look at [this](#) post.
